

Download it now: http://secunia.com/vulnerability_scanning/personal/ Secuina PSI is a great Windows application to give you visibility into what security threats are sitting on your computer. There are so many pieces and parts of software that can be easily compromised... how do you keep up with all the updates? Use Secuina PSI. It is free for personal use and I don't compute without it. Not only does it show you what has an issue but gives direct links on how to fix it. Cool.
